44-01 21ST STREET, LONG ISLAND CITY, N.Y. 11101

4 FITZROY SQUARE, LONDON
24 RUE DES ECOLES,

Contents of Volume 2

March

V. E. Vannier, W. P. Bryan and D. H. Campbell: The preparation and properties of a hapten-cellulose antibody adsorbent	1
G. Hoffmann, Ann T. McKenzie and M. M. Mayer: The steady-state system in immune hemolysis: description and analysis; application to the enumeration of SAC'4	13
K. Seth, A. Nisonoff and S. Dray: Hybrid molecules of rabbit γ -globulin formed by recombination of half-molecules of γ -globulins differing in genotype at two loci	39
R. Klinman, J. H. Rockey and F. Karush: Equine antihapten antibody II. The γ G(7S γ) components and their specific interaction	51
D. Smiley and Helen Horton: Isolation and study of the function of human γ_2 -globulin glycopeptide	61
Communication to the editors	
H. W. M. Schuurs, L. van Es and K. W. Pondman: Separation of skin-sensitizing and complement-fixing antibodies from guinea pig anti-bovine insulin sera	67

June

M. M. Mayer and J. A. Miller: Inhibition of guinea pig C'2 by rabbit antibody. Quantitative measurement of inhibition, discrimination between immune inhibition and complement fixation, specificity of inhibition and demonstration of uptake of C'2 by EAC'1a,4	71
G. H. Wirtz: Influence of aliphatic amines on the interaction of human C'1 with EAC'4	95
L. Korngold: The effect of hemoglobin on the haptoglobin-anti-haptoglobin reaction	103
Ruth Arnon: The reaction of papain with antipapain	107
Marian E. Koshland, Frieda M. Englberger and Suzanne M. Gaddone: Evidence against the universality of a tyrosyl residue at antibody combining sites	115
Anita V. Luisada-Opper and H. Sobotka: Coupling of proteins with radioactive <i>p</i> -diazobenzoic acid and its methyl ester	127
H. Froese and A. H. Sehon: Kinetic and equilibrium studies of the reaction between anti- <i>p</i> -nitrophenyl antibodies and a homologous hapten	135
Iselotte Graf, J. Yarov and M. M. Rapport: Immunochemical studies of organ and tumour lipids—XV. The reactivity of anti-lactose sera with cytolipin H	145
R. A. Reisfeld, S. Dray and A. Nisonoff: Differences in amino acid composition of rabbit γ G-immunoglobulin. Light polypeptide chains controlled by allelic genes	155

- J. D. Almeida, B. Cinader and D. Naylor*: Univalent fragments of antibody: a study by electron microscopy
- R. Masseyeff, J. Gombert et J. Josselin*: Méthode de préparation de la β_2 -macroglobuline du sérum humain
- K. Onoue, Y. Yagi and D. Pressman*: Immunoabsorbents with high capacity
- A. A. Hirata and D. H. Campbell*: The use of a specific antibody adsorbent for estimation of total antibody against bovine serum albumin
- Publisher's Notice

September

- H. F. Deutsch*: Relationships of two light chain immunoglobulins isolated from the same human source (low molecular weight immunoglobulins)
- R. M. Stroud, K. F. Austen and M. M. Mayer*: Catalysis of C'2 fixation by C'1a: reaction kinetics, competitive inhibition by TAME, and transferase hypothesis of the enzymatic action of C'1a on C'2, one of its natural substrates
- G. Mancini, A. O. Carbonara and J. F. Heremans*: Immunochemical quantitation of antigens by single radial immunodiffusion
- H. I. Lehrer and Helen van Vunakis*: Immunochemical studies on carboxypeptidase A
- J. P. Vaerman, H. H. Fundenburg, C. Vaerman and W. J. Mandy*: On the significance of the heterogeneity in molecular size of human serum γ A-globulins
- H. E. Schultze, H. Haupt, K. Heide, N. Heimburger and H. G. Schwick*: Comparative investigations of purified diphtheria and tetanus T-components and their fragments
- Erratum

December

- F. A. Green*: Proteolysis of fluoresceinated proteins
- N. Weliky and H. H. Weetall*: The chemistry and use of cellulose derivatives for the study of biological systems
- F. Borek and Y. Stupp*: Specificity of delayed reactions to hapten-polypeptide conjugates
- B. A. Askonas, R. G. White and P. C. Wilkinson*: Production of γ_1 - and γ_2 -antioalbumin by various lymphoid tissues of the guinea pig
- M. Reichlin, M. Hay and L. Levine*: Immunochemical studies on interspecies molecular hybrids of hemoglobin
- J. W. Goodman and J. J. Donch*: Phage-neutralizing activity in light polypeptide chains of rabbit antibody

G. W. Stemke: A study of soluble complexes and uncombined material in antigen-antibody reactions involving allotypic specificities of purified rabbit γ -globulin	359
I. Z. Atassi, R. K. Brown and Marijane McEwan: Immunochemical studies of hemoglobin and the role of the sulfhydryl groups	379
T. Paraskevas and J. W. Goodman: Components of fraction III and pepsin-digested fraction III from papain-digested rabbit γ -globulin	391
K. Onoue, Y. Yagi, A. L. Grossberg and D. Pressman: Number of binding sites of rabbit macroglobulin antibody and its subunits	401
J. Gleich and P. Z. Allen: Immunochemical studies on some immune systems involving β (1,4) linked glucose	417
P. Z. Allen, G. J. Gleich and A. S. Perlin: Some structural features of the antigenic groupings involved in the cross reaction of oat glucan with type VIII horse antipneumococcal serum	433
Notice	445

* Denotes a Communication to the Editor

† Denotes an Erratum

Aims and Scope

Immunochemistry involves the specialized disciplines of many fields of physical, biological and medical sciences. Most investigators who are interested in immunochemistry are specialists in one or more of these disciplines and, as a result, immunochemical literature appears in a wide variety of journals and other types of publications. The purpose of the Journal *Immunochemistry* is to eliminate the necessity for such dispersed publication by serving as a specific medium for material dealing with the chemical and physical aspects of immunology and related problems. The Journal is not intended to replace any of the present journals dealing with general immunology but is to be more specifically a chemical journal dealing with antigens and antibodies, chemical aspects of immune mechanisms and methodology or investigations related to such subjects.

Four types of articles will be published. The first and major type will be original experimental investigations which have not been previously published and that can be considered as complete rather than preliminary reports. Full length papers of theoretical material will also be considered for publication. The second type will be Communications to the Editors and will be limited to space which is equivalent to about 1000 words including tables, figures or illustrations. These may be preliminary reports of original work (not abstracts), qualitative or theoretical material or a brief article of editorial nature dealing with some problem in immunochemistry. Sufficient data or information must be presented to justify conclusions and must have the approval of the members of the Editorial Board. The third and fourth types of material will be Book Reviews and Comprehensive Critical Reviews of major problems of general interest. Both of the latter forms will usually require invitation only, but the Editors will also consider volunteer contributions of this nature at any time.

The first two or three years of this publication will be considered a period of initial growth and development. Consequently, some changes will undoubtedly be made during this period and the Editors welcome suggestions for modification. During this period, the Journal will be published quarterly.

Since this Journal is intended for international participation by investigators in the field of immunochemistry, manuscripts will be published in either English, French, German or Spanish. Pergamon Press will translate non-English manuscripts into English for review and if accepted, the publication will appear in English.

The contents of contributors shall be the sole responsibility of the Authors. Publication shall not imply concurrence of the Editors or Publishers with the Author's interpretations, conclusions or validity of data.

Notes for Contributors

Submission of manuscripts. Manuscripts should be sent to one of the Regional Editors. Contributions from France should be sent to Professor Bussard; those from Switzerland and the British Isles should be sent to Professor Isliker. Manuscripts from other European countries, Australia and Africa may be sent to either of the above two Editors. Manuscripts from the Eastern United States, Eastern Canada, Mexico, and South America, should be sent to Professor Karush; those from the Western United States, Canada and Asia should be sent to Professor Campbell.

Form of contributions. Although manuscripts may be submitted in either English, French, German, Russian or Spanish, publication will be limited to the first four. Russian manuscripts will be translated and published in English if approved. All papers must have an accompanying abstract in English as well as in the language used for the article. All contributions must be submitted in typewritten duplicates and with lines spaced at least double spaced and with margins which provide sufficient space for notations. Submission of three copies of the manuscript will facilitate refereeing and rapid publication. Manuscripts dealing with experimental work should be divided into major sections such as Introduction (optional), Experimental (with Materials, Methods and Results) followed by Discussion, Conclusions and Bibliography. If a large number of abbreviations are used, e.g., sRNA, EA, Ag, EEM, etc., it may be advisable to include a glossary defining such terms.

The title, with authors and their affiliations, should be placed on a separate page. On the same page give an abbreviated title to be used as a running headline.

References should be indicated consecutively as they appear in the text by superscript arabic numbers in parentheses, e.g. Franklin⁽¹⁾. The full references should be cited in a numbered list at the end of the paper using the following style:

FRANKLIN E. C., FUDENBERG H., MELTZLER M. and STANWORTH D. R., *Proc. natn. Acad. Sci. U.S.A.* **48**, 914 (1962).
MELTZLER M. and STANWORTH D. R., *Advances in Immunology* (Edited by W. H. TALIAFERRO and J. H. HUMPHREY) Vol. 1, p. 67. Academic Press, New York (1961).

Footnotes. Statements or references which do not fit into the text of the paper or literature references should be noted by the following symbols: *, †, ‡, §, starting afresh on each page, e.g., ... crystalline trypsin*.

Footnotes should be typed at the bottom of the page on which they appear.

Tables. All tabular material, flow charts, etc., should be typed on a separate manuscript page and should be intelligible without reference to the text. Headings should be concise, should clearly present the subject matter, and should be a part of the table. Footnotes to tables should also be placed on the same page and headings should use some system such as superscripts ^a, ^b, ^c, etc., instead of numbers.

Figures and illustrations. Figures and illustrations should be included separately and not as part of the text. They should be about twice the published size and be clearly marked on the back as to top, number and author's name. Either the original or glossy prints may be used if care is taken in making good reproductions. Indicate on the manuscript where figures or illustrations should be inserted. Legends should be given on a separate page and clearly present enough information to make the figure understandable. The following standard symbols should be used on line diagrams:

▲ △ ▽ ▿ ■ □ × + ● ○

General considerations. It is important to all concerned that a manuscript be carefully read for errors of clarity before sending to an Editor.

Reprints. Fifty reprints of each paper are supplied by the publisher free of charge and will be sent to the named author. Additional copies in multiples of 50 can be obtained at reasonable cost if ordered before publication, and an order form for this purpose will be sent to the author.
